

# NORTHWEST WATER TREATMENT, INC.

## RESIDENTIAL WATER SOFTENING SYSTEMS

### STANDARD & SOFTENER / KDF COMBINATION UNITS

#### WATER CONDITIONING MEDIA

##### Water Softening Media

Water softening removes troublesome hardness elements, as well as soluble iron and manganese from your water supply. These elements leave damaging residue in plumbing, water heaters, washing machines, and other appliances, decreasing their efficiency and operating life. Softened water produces cleaner clothing, sparkling dishes and glassware, improves skin complexion, and adds luster to hair. Since it enhances the effectiveness of cleaning agents, you'll save money on detergents, cleaners, soaps, and shampoos.

##### KDF-85®

Northwest Water Treatment's combination softeners include both softener resin and KDF media, in one tank. This produces a water conditioner capable of controlling iron bacteria, reducing hydrogen sulfide levels, and filtering oxidized iron, in addition to providing the normal benefits of softened water.

#### FEATURES

##### ◆ Control Valve

Five cycle, non corroding, durable, very reliable control valve is fully ported to 1" for high flow with minimal pressure loss. The only internal moving part is a Teflon coated brass piston. A bypass valve, and quick release fitting are included as standard equipment. Controller operation is fully automatic.

##### ◆ Media Tank

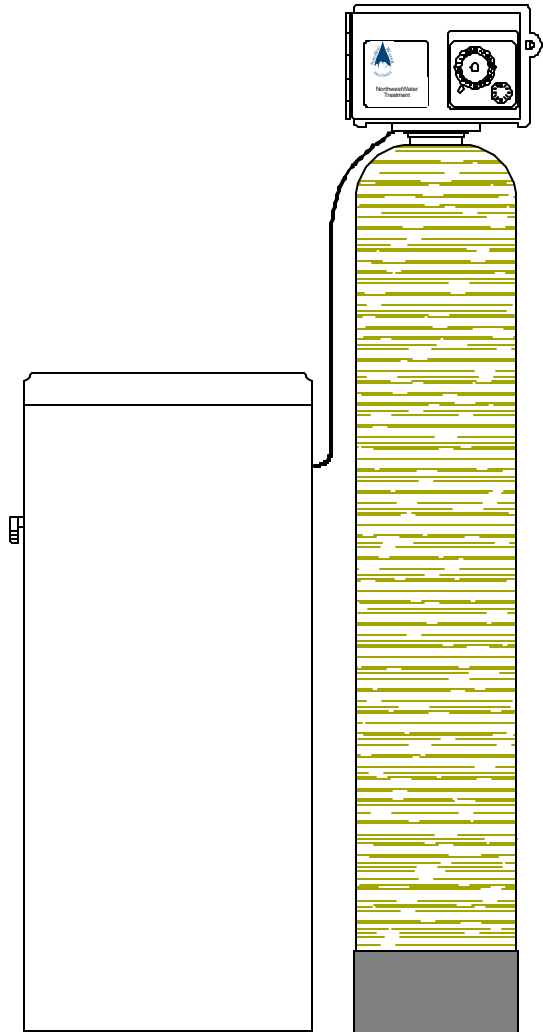

Conditioner tanks incorporate a seamless, one piece thermoplastic liner, overwound with epoxy/fiberglass laminate that is completely rust and corrosion free. It is approved by NSF, UL, and meets the requirements of WQA standard S 100.

##### ◆ Options

Water Meter Initiated regeneration cycle.

#### WARRANTY

Fully backed by the manufacturer's, and Northwest Water Treatment, Inc. Warranty, including 10 years on brine, and media tanks, and 3 years on the control valve. (Please see Northwest Water Treatment, Inc. Warranty)

#### SALES, INSTALLATION, & SERVICE

Northwest Water Treatment, Inc. is a licensed, insured water conditioning equipment contractor, with 24 years of experience in the water treatment field. We provide careful analysis of the water, then perform media pilot testing to determine the appropriate method of treatment for your particular water problem. Our professional, friendly service personnel insure the proper installation and working condition of your water conditioning system.
